

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

REPORTS TO THE SURGEON GENERAL, PUBLIC HEALTH AND MARINE-HOSPITAL SERVICE.

CEREBROSPINAL MENINGITIS IN TEXAS.

Surg. Guiteras, at Galveston, Tex., reports that from January 19, the date of the occurrence of the first reported case of cerebrospinal meningitis at Galveston, to February 22, a total of 34 cases, with 9 deaths, was reported in that city.

At Houston, Tex., the health officer reports the occurrence of 15 cases of cerebrospinal meningitis, with 4 deaths, during the week ended February 3, and 18 cases, with 6 deaths, during the week ended February 10.

The disease is still present at other points in the State, but reports of the number of cases occurring have not been received.

PLAQUE-PREVENTION WORK.

DISTRIBUTION OF POISON.

In connection with the making and maintenance of a squirrel-free zone around the cities of California on San Francisco Bay, 1,427 acres of land in Alameda County were covered with poison during the week ended February 10, 1912.

During the same period 5,270 acres of land in San Joaquin County and 5,930 acres in Stanislaus County were covered with poison for the purpose of eradicating plague foci.

RECORD OF PLAGUE INFECTION.

Places.	Date of last case of human plague.	Date of last case of rat plague.	Date of last case of squirrel plague.	Total number of rodents found infected since May, 1907.
